

## High Wind / Dust Infiltration Warning

---

Most Coeur d'Alene Window products are tested and have assigned performance ratings (AAMA). Our products are in general designed for residential or light commercial use. Unless cleared in writing, our products are not intended for use in high rise buildings or in areas of extreme wind load.

Certain products such as OXXO are not intended to be directly exposed to the elements when wind or blowing sand/dust is a factor. In these instances, utilizing other versions of our 3000 or 6000 series doors is strongly encouraged.

When wind or blowing sand/dust is a concern, we strongly encouraging upgrading products to achieve a better design pressure and lower air infiltration rating. In areas of moderate to high wind (consistent blowing or winds frequently more than 30 mph) casement and awning configurations should be considered.
